

A new bottle for Bormioli Rocco

The PET bottles family destined for the pharmaceutical market expands with the launch of the 500 ml bottle with rectangular basis.

Made by the injection-stretching-blowing technique with neck finish PFP 28, the new PET bottle available in amber stands next to the already existing 200 ml bottle.

Boasting square lines, the bottle is characterized by its distinctive shape within a market typified by cylindrical bases and round shapes, but without giving up that message of tradition and reliance they convey and that persuades and assures the customer.

The wide surface that can be decorated and labelled leaves room for the contents and graphics.
